Prime Surgical International

PRIME SURGICAL INSTRUMENTS

Quality that builds confidence

For nearly 40 years, Prime quality instruments have been provided to surgeons across the world to help improve the standard of patient care. The Prime Brand is especially known globally in the CVT and ENT specialties with numerous proprietary instruments co-developed with leading surgeons in these fields.

Today, the Prime Brand is an important part of the Surgical International Industry and continues its legacy in providing high quality, hand-crafted instrumentation that meets the surgeon's requirements.

Over the years, the Prime Brand has maintained high standards of quality and continues to emphasize customer service and satisfaction. As surgical procedural needs change, specialty surgeons can count on Prime branded instruments to meet their new requirements.

PRIME

American designed. German engineered. World-class quality.

Prime Branded surgical instruments are made from 100% German forgings to ensure the highest quality and impeccable functionality. These instruments are fully guaranteed for the quality of material and workmanship and has been subjected to an established quality control process that consists of a comprehensive product inspection that verifies the form, fit, and function of all the instruments.

Prime ®Forceps and Scissors are made of the finest stainless steel, processed to obtain optimum corrosion resistance, resilience and strength.

Ratchets on Prime ® Vascular Clamps provide indispensable finite control for arterial clamping. Ratchets are designed with the steps (1 x 7, 1 x 9, 1 x 11) to furnish the specific amounts of required compression.

Prime ® DeBakey® Jaws are designed to clamp and hold without slipping. Cardiovascular clamps featuring these jaws will grip tissue delicately but firmly, or will completely occlude a vessel, reducing the danger of crushing or causing undue damage to the intima.

The LIFE-LOK® Box Lock construction of all Prime Vascular Clamps and a growing assortment of general instruments have virtually eliminated cracked and broken box locks. This major improvement materially prolongs the useful life of these expensive instruments and reduces the necessity for repair or replacement.

We are able to provide **laser surface or ebonized finishes** for most stainless steel instruments to provide the appropriate reflection-lowering finish for their use in laser surgery.

We continually strive to improve our products, therefore changes may result. All specifications and measurements in this Catalog may vary within accepted industry standards or change without notice.

Measurements given in our Catalog refer to overall length, unless specified otherwise.

PRIME SURGICAL INSTRUMENTS

Guarantee/Warranty

This warranty information may be modified from time to time by Please check the Prime Instruments on-line catalog website for the most current warranty information:WWW. Primeinstrument.com

Except as provided below, all surgical instruments stamped or etched with the Prime Brand shall be free from manufacturing defects in material or workmanship for the life of the instrument. Prime sole responsibility under all warranty shall be, at Prime option, to either repair, replace, or refurbish any instrument proving defective, free of charge.Prime makes no warranty with respect to In-Ex branded instruments, lenses, malleable items, micro instruments, bougies and disposable products. This guarantee is void if instruments are not maintained or repaired properly, or if they are not used for their intended surgical purpose.

LIFE-LOK® BOX-LOCK

Prime Instruments that feature the LIFE-LOK® box-lock are warranted not to break or crack in the box lock area due to stress buildup for the life of the instrument.

NEEDLE HOLDERS

PrimeNeedle Holders containing Tungsten Carbide (TC) inserts are warranted against cracking or fragmenting in the jaw for (3) years.

TUNGSTEN CARBIDE INSERTS

Prime Scissors, Needle Holders and Wire Cutters that obtain Tungsten Carbide (TC) inserts, are guaranteed for (3) years. Replacement parts, such as springs, are guaranteed for (1) year.

NON-DISPOSABLE LAPAROSCOPIC INSTRUMENTS

Prime Non-Disposable Laparoscopic Instruments are warranted against failure in normal use for one (1) year. This warranty does not cover routine sharpening or refurbishment, or repair of damage caused by misuse.

The above warranties are contingent upon the proper maintenance and use of the instruments and do not cover instruments that have been modified without Prime approval or which have been subjected to unusual stress, or on which the original identification marks have been removed or altered.

TELESCOPES AND LIGHT CARRIERS

All light carriers and Rod Lens Telescopes etched with the Prime Name shall be free from manufacturing defects in material or workmanship. Any parts proving defective in the first 12 months of ownership will be serviced, repaired or replaced at Prime option, free of charge.

This limited warranty is the only warranty provided by Prime. Prime disclaims all other warranties, either express or implied, including but not limited to implied warranties of merchantability and fitness for particular purpose. In no event shall Prime have any liability for indirect, consequential, special, incidental or punitive damages, however caused, on any theory of liability and whether or not it has been advised of the possibility of such damages.

CARE AND CLEANING

High quality surgical instruments are typically made from surgical grade stainless steel (i.e., 410, 420 etc.). The grade varies by manufacturer and by type of instrument. For example, a scissor may be fabricated of 420 stainless steel to enable the blades to be hardened adequately for long life. A forceps on the other hand usually does not require the same hardness, and may be fabricated from a 410 grade.

Malleable retractors are made of yet another grade. The grade of stainless steel selected for specific instruments is critical for long serviceability. The grade of steel reflects its hardness and its resistance to corrosion. Unfortunately, there is an inverse relationship, that is, the more the steel can be hardened, the greater its susceptibility to corrosion.

In an effort to reduce corrosion problems, Prime specially treats (passivates) its instruments to make the surface less chemically active with its environment. All Prime Instruments feature this special high gloss finish. This finish reduces the number of pits in the instrument, which in turn reduces the number of sites where corrosion can occur. These steps are necessary due to the environment, which is very harsh as a consequence of the composition of blood and other fluids, the chemicals used to clean and disinfect the instruments, and finally the methods used to sterilize them.

USE

Use instruments for their intended purpose only.

CLEANING

Instruments should be thoroughly cleaned with cleaners such as: Prime-clean, Prime Liquid Detergent, Prime Instrument Cleaner or Prime-Wash as soon as possible after use. Once blood or other foreign matter has dried, removal is very difficult. If left in place these contaminants can provide sites for corrosion to begin. Distilled water (pH near 7) is recommended for soaking and cleaning instruments. If cleaning manually, avoid use of wire brushes or abrasive powders as these can create sites for corrosion. An ultrasonic cleaner is recommended.

CARE

After a thorough cleaning, instruments with moving parts should be lubricated using a product such as Prime-Lube or Prime-Kreem to keep surfaces lubricated. It is important to use water soluble lubricating agents only.

STERILIZATION

The use of repeated flash cycles is damaging to instruments, therefore a standard steam cycle is preferred. Instruments should be arranged in an open position and instruments fabricated from different metals should be separated to avoid electrochemical reactions. Refer to the sterilizer manufacturer's instructions and AORN guidelines for proper sterilization techniques.

MAINTENANCE

Routine inspection for damaged tips, jaw alignment, loose box-locks, and worn or damaged ratchets can identify problems. If caught early these problems can often be repaired at a much lower cost than the replacement price of an instrument which has become damaged beyond repair. Contact your Prime Sales Representative to see the Prime Care and Cleaning Products, set up an instrument inspection program, and review our extensive repair capabilities.

N-COMPASS™ INSTRUMENT MANAGEMENT SYSTEM

Your Path To Total Instrument Management

THE N-COMPASS SYSTEM SAVES TIME AND MONEY BY:

- Minimizing risk of errors in instrument set assembly, which can help reduce OR schedule delays
- Enabling Central Processing staff to locate instruments to locate instruments by providing offering the functionality to search hospital inventory
- Identifies frequently used instrument sets and helps you manage inventory relative to case volume
- Minimizing risk of purchasing errors and increased requisition processing time by clear identification of instrument requirements and vendors

THE N-COMPASS SYSTEM PUTS YOU IN CONTROL:

CUSTOMIZE COUNT SHEETS

- Use and update easily
- Include images of each instrument and the assembled instrument set
- Customize to your specific needs
- Make and save global instrument changes

INSTRUMENT LOCATOR

- Search by catalog number, description, or vendor
- Search set inventory to locate a specific instrument eliminating the need to open sets

INSTRUMENT REPAIR RECORDS

- Generate instrument/equipment repair reports
- Review repair status
- Create repair/replacement requisitions automatically

INSTRUMENT INVENTORY

- Produce a complete instrument inventory
- Sort instrument inventory by instrument type, catalog number, description, vendor, set name, and surgical specialty

DIGITAL IMAGE DATABASE

- More than 20,000 individual instrument images at your fingertips
- Import assembled set images
- Save time and reduce errors in new and replacement instrument ordering
- Train new employees more easily with identified instruments and sets

The N-COMPASS Instrument Management System is a software-based management tool designed by Prime *that allows you the freedom to customize and manage your instrument count sheets.*

CROSS REFERENCE LIST

- Simplify instrument ordering by cross referencing instruments with leading suppliers

PRICING/BUDGETING

- Dollar values for each instrument, set, and specialty
- Easy access to pricing to assist in budgeting and financial planning

REPORTS

- Generate staff productivity and set use reports
- Track data on set usage to help identify both high and low set usage

N-COMPASS SERVICES PROVIDED BY TELEFLEX:

- Software installation
- On-site physical set inventory
- Data entry and verification

CHAPTER OVERVIEW

Today, the Prime Brand is recognized worldwide for excellence achieved in the area of Ear, Nose and Throat surgical instrumentation, which has established Prime as a market leader in the Otolaryngology specialty with our rigid endoscopes.

A wide selection of unique designs, patterns and proprietary Prime ENT Instruments co-developed with leading surgeons are provided to customers across the world to help improve the standard of patient care.

Our ENT Prime Instruments meet your hospitals needs in the ENT specialty by offering high quality OR grade instruments made of 100% German and U.S. stainless steel. A full line of rigid endoscopes – laryngoscopes, bronchoscopes and esophagoscopes – is offered, along with many laryngeal, bronchial and esophageal instruments used during endoscopic surgical procedures. Biopsy forceps, grasping forceps, retrieval forceps, aspirating tubes and other related instruments have been designed specifically in length and diameter to work with Prime Scopes.

PRODUCTS

Our full line of Prime ENT Scopes, Tracheostomy Tubes, Bougies and Dilators are made in the U.S.A. and includes the following:

- Laryngoscopes
- Bronchoscopes
- Esophagoscopes
- Tracheostomy Tubes
- Dilators
- Maloney and Hurst Bougies

The Holinger Anterior Commissure Laryngoscope incorporates the principle of the Yankauer post-nasal speculum. The distal end of the superior surface of the tube rises obliquely and flares laterally and the proximal portion drops obliquely. This increases the lumen and gives a larger field for work by elevating the tuberculum of the epiglottis. Supplied with one light carrier. Cable sold separately (pg.92).

PRIME MICRO-LARYNGOSCOPES

Pilling® Micro-Laryngoscopes fulfill the need for maximum illumination and light intensity in microsurgery. The lighting systems on the micro-laryngoscopes provide more than adequate illumination for microsurgery and diagnosis when used under high microscopic magnification. These laryngoscopes were designed with direction from leading surgeons to meet their demanding requirements.

JAKO MICRO-LARYNGOSCOPE TYPE III

522206

522209

The Jako Micro-Laryngoscope Type I has been considered the standard scope for micro-laryngoscopy. However, Prime offers the Jako Micro-Laryngoscope Type III because of its superior design. It is identical in size and configuration to the Type I and Type II, but the Type III scope features an improved lighting system which diverts the fiberoptic cable out of the way of the surgeon's hands. Additionally, a bifurcated light carrier running down each side of the laryngoscope barrel provides bilateral illumination, which minimizes shadows from the instruments as they approach vocal cord lesions. Because of these additional benefits, Prime is pleased to offer the Jako Micro-Laryngoscope Type III . Supplied with one bifurcated light carrier. Cable sold separately (pg.92).

The Dedo-Prime Micro-Laryngoscopes have been designed to provide the ability to examine the vocal cords at the anterior commissure in the majority of patients, for example, patients with bull necks, short jaws or prominent upper teeth. The dimensions of the Dedo-Prime Micro-Laryngoscopes are narrow enough between the light carriers to permit moving the instrument off the incisors and down between the molars to permit visualization of the anterior commissure. The fiber optic light carriers are adjacent to the handle with a metal protected fiber optic bundle which runs in a groove in the handle. When used with the operating microscope equipped with a 400 mm lens, the Dedo-Prime Micro-Laryngoscope affords binocular vision for microendoscopy. Supplied with one bifurcated light carrier. Cable sold separately (pg.92).

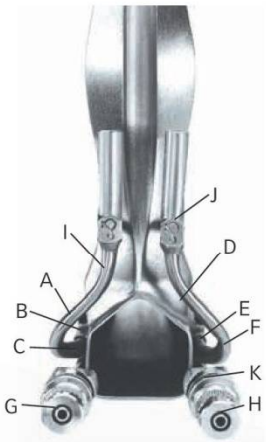
ABRAMSON-DEDO MICRO-LARYNGOSCOPE



For Difficult Intubations

The Abramson modification of the Dedo-Prime Micro-Laryngoscope was designed to increase the efficiency of Venturi -type ventilation. It provides the physician with a choice of six positions for placement of the Venturi Needle (up to 14 Ga.). The inside is finished to be nonreflective, and 14 Ga. blunt needles may be used for smoke evacuation. It comes supplied with a set of right and left light carriers, two 12" 14 Ga. blunt needles and two Luer-Lok Adapters for use with Sanders system tubing.

Available in two proximal widths. The 25.5 mm width can be introduced in most patients and is easily aligned with the microscope (400 mm objective). The 19 mm scope has the narrowest width capable of absorbing both microscope sight lines and can be used in most patients who previously could accept only the original Holinger scope.

- Holinger distal end, ease of introduction, excellent visualization.
- 19 or 25.5 mm proximal widths, increases patient selection for micro procedures.
- Standard adult handle, can be used with most suspension systems, B.U. suspension handle available as option.
- Single light carrier, external tube dimensions are kept to a minimum.
- Laser finish, laser safety.
- Supplied with one light carrier. Cable sold separately (pg.92).

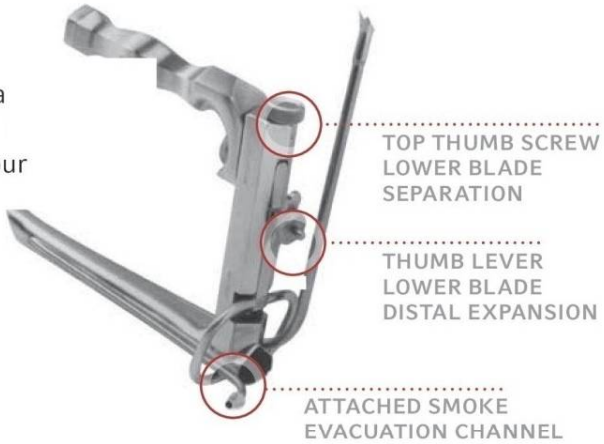
PRIME LASER LARYNGOSCOPES

The use of lasers for ablative surgery for tissue removal has become increasingly popular. To meet the demand, a complete line of Prime Laryngoscopes and Accessories are available for use in laser surgery procedures. All of our laser instruments have a non-reflective, dull finish to reduce the chance of the laser beam reflecting off the instrument.



PRIME BIVALVE LASER LARYNGOSCOPES

These special scopes are modified designs of the Prime-Dedo Anterior Commissure and Ossoff Posterior Commissure Micro and Laser Laryngoscopes.

- The Dedo Anterior Commissure Scopes provide minimal chance of teeth breakage, yet offers optimum microscopic visibility.
- The Ossoff Posterior Commissure Scopes provide the ability to lift the endotracheal tube and permit entrance and microscopic visibility beyond the vocal cords.
- These scopes provide increased visibility at the surgical site through expansion and distension of the split tubes.

PRIME-DEDO DOUBLE-ACTION LASER LARYNGOSCOPES

- Lower blade separation provides an increased operative area for ease of instrumentation.
- Distal expansion of the lower blade allows maximum visibility of the cords and beyond.
- Non-reflective internal surface minimizes laser beam deflection.
- Removable handle reduces weight during insertion. This handle can be attached to the standard laryngoscope holder (502245), or Tobey Laryngoscope Holder (502248), or adapted for use with the Boston University System (502260).
- Smoke evacuation channel is permanently attached and extends distally for maximum removal of laser plume.
- One large fiberoptic light carrier is supplied with attached cable for optimum distal lighting.

Both styles of bivalve Laser Laryngoscopes have O.D. measurements which can exceed the anatomical limits for their intended patient size.
A thumb operated lever enables the physician to tactilely gauge the degree of pressure exerted.

It is supplied with two light carriers permanently attached to fiber optic cables (pg.92). and features a non-reflective, dull interior finish. Its large oval light carriers provide maximum illumination and it contains an integral aspirating channel for automatic smoke and steam evacuation. The same narrow dimensions as the standard Dedo-Prime Micro-Laryngoscope allow its use in many cases in which larger micro-laryngoscopes are contraindicated.

The Healy-Jako Subglottiscope was designed specifically for the pediatric patient. The small tapered 6 mm distal tip allows the subglottiscope to pass farther down the airway and give access to lesions below the level of the vocal cords, while still being able to utilize the operating microscope. Supplied with light carriers permanently attached to fiber optic cables. Features:

- Non-reflective, matte interior finish. This finish decreases the chance of the laser beam reflecting off the inside of the scope and burning unintended tissue. The subglottiscope is most useful when the carbon dioxide laser is used.
- Disconnect handle. Subglottiscope can be held by standard laryngoscope holder 502245 or Tobey 502248. When the handle is unscrewed, the subglottiscope can be easily inserted and manipulated.
- Large fiber optic light carriers. The large cables allow for maximum illumination and light intensity.
- Removable 14 Ga., 3-7/8" (10 cm) ventilating needle.
- Needle locking mechanism and tubing clip on the handle.
- Assures proper placement and hold of ventilating needle while keeping tubing out of the way.

Designed to view and access beyond the vocal cords for standard and laser procedures for subglottic stenosis and subglottic lesions.

- Extended length with tapered tube (longer than standard laryngoscope).
- Wide proximal end.
- Matte finish inside lumen to reduce possible reflection of laser beam.
- Integral, distally-opened smoke evacuation channel.
- Removable 14 Ga., 3-7/8" (10 cm) ventilating needle.
- Needle locking mechanism and tubing clip on the handle.
- Single, one-piece design fiber optic light carrier/cable.
- Adult size laryngoscope handle.
- Includes 502599 Needle Luer-Lok Adapter to Sanders Tubing.
- Passes easily through the vocal cords to reach the subglottic area.
- Provides binocular vision with use of a microscope with 350-400 lens.
- Less chance of burning unintended tissue.
- Allows for removal of laser plume rapidly.
- Allows for Venturi ventilation (order separately).
- Assures proper placement and hold of ventilating needle while keeping tubing out of the way.
- Provides optimum distally delivered light.
- Allows use of laryngoscope holder (502245) or Tobey Laryngoscope Holder (502248) for two-handed surgery.

Prime has classic Ossoff and Dedo-design video laryngoscopes include dual channels for increased versatility. The dual channel design allows the surgeon to position the telescope, suction tube or light carrier wherever it is most comfortable and is thus helpful for the left-handed surgeon. The Video Laryngoscope System is an ideal resource for training and education since the telescope can be connected to most video systems for visualization of the surgical site. The 0 degree telescope (4 mm x 177 mm) features a forward view with a right-angle eyepiece to ensure that it is not in the surgeon's way. This Prime Telescope can be autoclaved. The telescope eyepiece will accept any standard C-mount video coupler. The fiber optic terminal of the light carrier accepts ACMI style cable connections. Each complete Video Laryngoscope System includes a laryngoscope, telescope, suction tube and light carrier. Sterilization trays are optional, see

VENTURI ADAPTERS FOR BRONCHOSCOPES AND LARYNGOSCOPES

502562

502566

Flow and pressure characteristics vary greatly according to the design of the bronchoscope or laryngoscope and any new combination should be studied carefully before clinical use. *Note: The Sanders Venturi System can be used only with tapered scopes.*

ITEM #	DESCRIPTION
502562	Albert-Sanders Venturi Adapter for laryngoscopes
502566	Sanders Venturi Adapter for Prime Bronchoscope 15 mm sidearm

TYGON TUBING WITH LUER-LOCK CONNECTOR

502574

Used in conjunction with Luer-Lok connector 502599 to fit into toggle valve. The bare end of the tubing connects to the Venturi Adapters For Bronchoscopes and Laryngoscopes, 502562 and 502566.

ITEM #	DESCRIPTION
502574	Adapter is 4 mm O.D. x 2.5 mm I.D.

506747	13-1/8" (33 cm)

INSTRUMENTATION FOR LARYNGOSCOPES

Suction Tubes

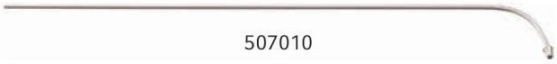
INSULATED CAUTERY SUCTION TUBE

507045

With thumb-valve for controlled suction, 4 mm diameter, 12 Fr.

ITEM #	DESCRIPTION
507045	Working length 8-5/8" (22 cm), supplied with a 10 ft. Bovie cord and plug (507046)
507046	10 ft. Bovie cord and plug with connection to fit insulated suction cautery tube. Cord only.

JACKSON OPEN END ASPIRATING TUBE



507010

Prime Aspirating Tubes, except in special designs, are constructed of stainless steel. They are measured in working length from distal tip to beginning of proximal curve or angle. Aspirating tubes should be 5 cm or 10 cm longer than the scope through which they are used.

ITEM #	WORKING LENGTH	FOR USE THRU SCOPES	TUBE DIAMETER
507010	20 cm	5.0 mm or larger	4 mm (12 Fr.)

JACKSON "VELVET-EYE" ASPIRATING TUBES

507030

These tubes have a smooth, oval-shaped opening on each side of the distal tip and a closed, blunt end.

INSTRUMENTATION FOR LARYNGOSCOPES

Micro-Laryngeal/Feder-Ossoff

FEDER-OSSOFF MICRO-LARYNGEAL GRASPING FORCEPS

Feder-Ossoff forceps include alligator grasping and cup biopsy jaws. All forceps have a matte laser finish and shafts that taper from 2 mm to 0.5 mm.

Double-action grasping forceps have aggressive serrated jaws for better holding and a suction channel with a Luer-Lok proximal fitting for smoke evacuation and improved visibility during laser procedures 506856.

Grasping forceps have finely serrated jaws, 1.1 mm wide tapering to 0.6 mm, 4 mm long and a working length of 23 cm.

Delicate biopsy cup forceps have a 1 mm jaw with a working length of 23 cm.

ITEM #	DESCRIPTION
506856	Grasping forceps, double action, straight, with suction
506858	Grasping forceps, angled up
506860	Grasping forceps, straight
506862	Cup biopsy, 1 mm, straight

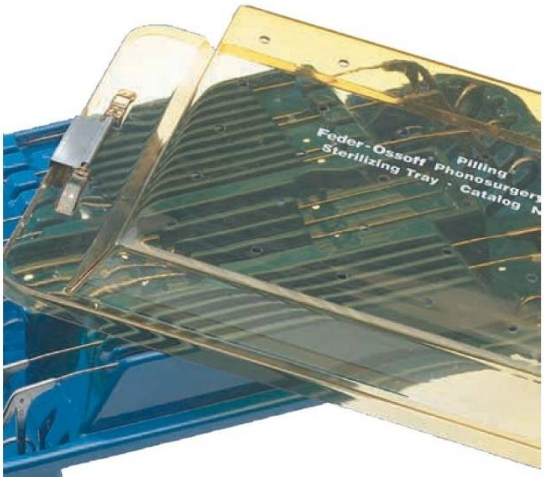
PRIME FEDER-OSSOFF PHONOSURGERY SET



506890

Prime Feder-Ossoff Micro-laryngeal Precision Instruments from Prime are designed for microlaryngeal procedures to retain, restore, or improve voice quality. Feder-Ossoff instruments are specially designed for phonosurgery/microflap surgery with Mayo blades on the scissors and angled handles with slender diameter shafts. Set includes twenty-seven instruments for use in delicate mucosal microflap dissection techniques.

- Mayo blades on scissors
- Matte laser finish
- Angled handles and slender diameter shafts
- Universal ring handle for knives and probes
- 23-27 cm working length
- Durable storage and sterilization tray

ITEM #	DESCRIPTION

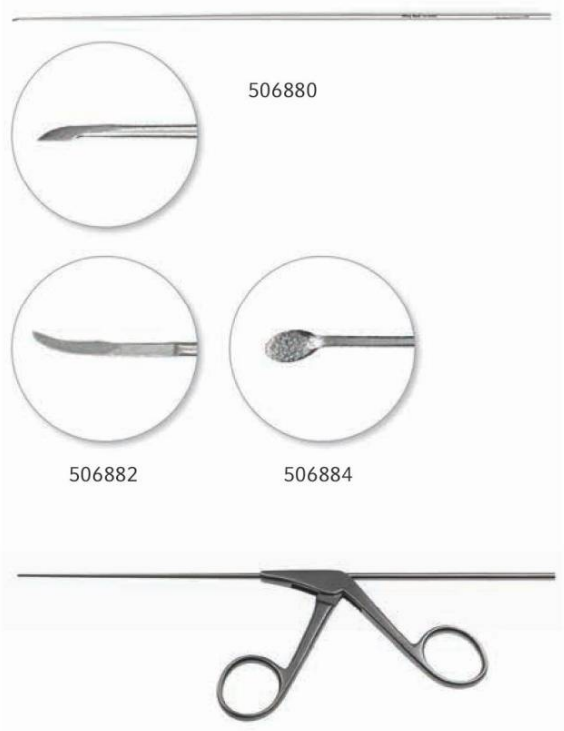
KNIVES AND KNIFE HANDLE



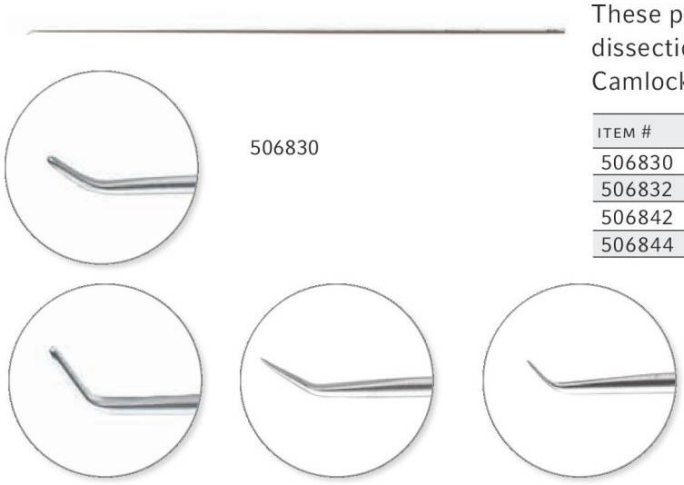
Shown with probe inserted into handle. Knives and probes can be set to any angle or depth relative to the handle.

All knives have 27 cm maximum working length and a 3.2 – 1 mm tapered shaft. Working length is measured from front portion of handle to tip of instrument.

ITEM #	DESCRIPTION
506880	Straight sickle, 3 mm blade
506882	Curved sickle, 3 mm blade
506884	Phono circle knife, 3 mm blade
506888	Universal ring handled knife handle with camlock

506888

PROBE/ELEVATORS



These probe/elevators allow for sharp and blunt dissection and elevating of tissue. All probes fit into the Camlock Handle (506888). 27 cm working length.

ITEM #	DESCRIPTION

MICRO-LARYNGEAL FORCEPS

The serrated triangular jaw allows for a larger surface area of tissue to be grasped within the 3 mm wide tips. These forceps have a 23 cm working length and a non-reflective finish for use with lasers. Jaws are uniquely angled and fenestrated to better grasp along the longitudinal surface of the respective chord, 2.75 mm wide triangular jaw, serrated jaw, 2 mm shaft. Fits adult laryngoscopes without interfering with microscope, 5 degree bend at the handle.
Non-reflective finish; can be used in laser surgery.

ITEM #	DESCRIPTION
506950	Triangular fenestrated, serrated jaw forceps, right, working length 9-1/4" (23.5 cm)
506952	Triangular fenestrated, serrated jaw forceps, left, working length 9-1/4" (23.5 cm)

Micro-Laryngeal/Jako-Kleinsasser

JAKO-KLEINSASSER MICRO-LARYNGEAL CUP FORCEPS (MOST COMMON & ESSENTIAL)

These Prime Micro-laryngeal Cup Forceps were designed specifically for everyday-use micro-surgery. They feature slender 2 mm diameter stems with miniature distal jaws in the shape of cup forceps and are made of dull finished stainless steel to reduce glare. Stems are angulated (5 degree bend at handle) for unobstructed vision and all have a 22 cm working length.

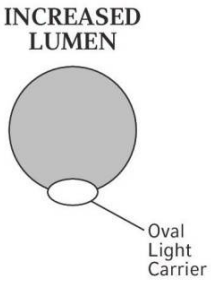
BRONCHOSCOPES

Holinger Design

HOLINGER VENTILATING FIBEROPTIC BRONCHOSCOPE



Designed by these fiberoptic bronchoscopes provide a nearly full view of the lumen with constant, cool illumination. Special features include:

- 15 mm sidearm for direct attachment of ventilation and anesthesia apparatus.
- Large fiber bundle for increased distal illumination.
- Oval fiber optic light carrier, which allows more viewing and instrumentation room in main tube.
- 15 mm diameter proximal end for attachment of accessories (window plug, Sanders Venturi, etc.).
- Smooth distal tip.
- Shortened proximal flare.
- Each Holinger Bronchoscope is supplied with one light carrier and one window plug (522595).
- Blue fiber optic cable sold separately (see page 92).

PRIME IMPROVED HOLINGER VENTILATING FIBEROPTIC BRONCHOSCOPES

524022	Telescope 2.7 mm, 0°
524036	Telescope Guide 2.7 mm
522552	Improved Holinger Bronchoscope 3.5 x 20
505670	Flexible 1 mm Alligator Forceps

Our most popular bronchoscope, the Holinger, has been modified for pediatric foreign body removal and features the following:

- Small distal tip. The original Holinger tip has been cut down to correspond with tube size, while still retaining smoothness.
- Built-in instrument channel for introduction of flexible forceps or disposable suction.
- Full lumen view. The oval fiberoptic light carrier has been raised slightly to provide a full lumen and give more room for instrumentation and a larger viewing area.
- 15 mm sidearm attachment allows direct attachment of ventilation and anesthesia apparatus.

Each Prime Improved Holinger Bronchoscope is supplied with one light carrier, one window plug (522595) and instrument guide rubber cap. Blue fiber optic cable sold separately (see page 92).

- Prime, Holinger-type Bronchoscope with window plug.
- Standard 15 mm anesthesia ventilating arm.
- Dedicated, distally-delivered YAG or suction channel.
- Dedicated, distally-opened smoke evacuation channel.
- Enlarged, oval fiberoptic, distal light carrier. One supplied with each scope.
- Five sizes of CO_2 bronchoscopes available.
- Can be used with CO_2 laser.
- Side ports can be used for flexible instrumentation.
- Blue fiber optic cable sold separately (see page 92).

OPTIONAL ACCESSORIES AVAILABLE

The Telescope Locking Device is an optional accessory that slides onto the shaft of the Telescope and can be twist tightened at any place along the length of the shaft of the Telescope as a stop against the Telescope Guide. This will keep the Telescope inside the bronchoscope, permitting insertion under direct telescopic vision lessening the chance of breakage, perforation, or getting mucous or blood on the lens. The lock also fits into the twist locking system of the Storz Bronchoscope Bridge System, permitting the use of Prime Telescopes in these competitive Bronchoscopes.

PRIME ESOPHAGOSCOPES

The Prime Esophagoscopes have been designed in conjunction with the innovators in esophageal surgery for examination, diagnostic procedures, and removal of foreign bodies in the esophagus. These fiberoptic scopes have been designed for ease of insertion. A variety of sizes and configurations are offered to meet the patient's specific needs.

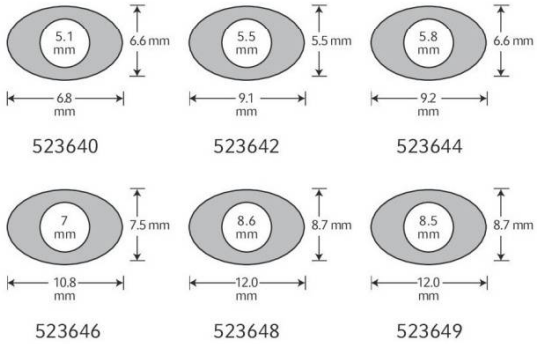
ESOPHAGOSCOPES

Pillsbury-Jesberg Design

NEW PILLSBURY-JESBERG ESOPHAGOSCOPES

523648



Drawings illustrate Nominal Proximal Internal Dimensions and Minimum Internal Diameter (I.D.), NOT TO SCALE.

The Pillsbury-Jesberg Esophagoscopes were designed with the light carrier fully incorporated into the textured handle. With this improved design, there is built-in protection for the light carrier during normal handling. The barrel and tip of the scope follow the familiar Jesberg design, facilitating gentle insertion while maintaining usual technique. Supplied with one light carrier. Blue fiber optic cable sold separately (see page 92).

Esophagoscopes provide a nearly full view of the lumen with constant cool illumination. Special features of these esophagoscopes include:

- Large fiber bundle for increased distal illumination.
- Aspiration channel on the exterior of the scope to permit maximum lumen.
- Oval fiber optic light carrier to allow more viewing and instrumentation room in main tube.
- Smooth distal tip.
- 15 mm proximal end for attachment of accessories.
- Blue fiber optic cable sold separately (see page 92).

Holinger Fiberoptic Esophagoscopes are supplied with one light carrier and one window plug (522595).

ESOPHAGOSCOPES

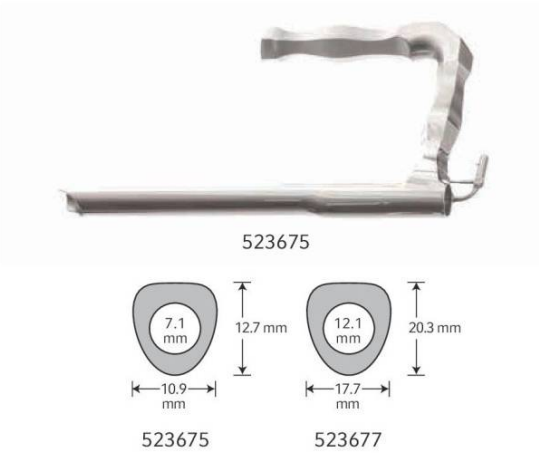
Specula

FORBES ESOPHAGEAL SPECULA



These specula are used for the retrieval of foreign objects lodged in the cervical esophagus. The lumen of these instruments is slightly off the round and the tube tapers gradually to the distal end. The length of the bevel of the tip varies according to the size of the instrument. Particularly useful in the removal of coins. Supplied with one light carrier. Blue fiber optic cable sold separately (see page 92).

A notched brace pushes the loop of the pin away from the jaws which simultaneously grasps the limbs of the pin. This action results in approximation of the point and keeper.

Forceps for Pediatric and Laser scopes

PEDIATRIC BRONCHOSCOPIC INSTRUMENTS

These miniature grasping and biopsy forceps and scissors with 2 mm stems have been designed to pass through the smaller pediatric bronchoscopes. The stems are slightly angled at the handle, affording unobstructed vision. Straight forward, 35 cm working length, will pass through a 3 mm or larger scope, 5 degree bend at handle.

BOUGIES/DILATORS

Esophageal Bougies

PRIME BOUGIES/DILATORS

The comprehensive line of Prime Laryngeal and Esophogeal Dilators and Bougies include designs by

MALONEY-STYLE & HURST-STYLE BOUGIES (MADE OF SILICONE, MERCURY FREE)

The advantages of our exclusive new esophageal bougies start with what they don't have. Namely, mercury. Mercury is toxic and requires special handling and waste disposal procedures. But our patented tungsten gel-filling is completely non-toxic.
What's more, these bougies can be sterilized via steam; unlike mercury-filled bougies, they won't rupture during steam sterilization.
In addition, the silicone casing is non-slip when dry and slippery when wet. So it gives you a good grip, yet allows for easier, less traumatic insertion.

- Patented tungsten gel-filling is completely non-toxic, making it safer for patients and staff, and far less cost of disposal.
- Calibration marks, along with radio-opaque material in the flexible tip of the Maloney style, make it easy to determine the exact depth of insertion.
- Date stamp and three-year guarantee.

HURST TUNGSTEN-FILLED ESOPHAGEAL BOUGIES

507606

These tungsten-filled bougies have rounded distal tips. The closure on the proximal end is drilled through from side-to-side so a finger cord may be used. 29-1/2" (75 cm) approximate overall length.

Esophageal Bougies

MALONEY TAPERED TUNGSTEN-FILLED ESOPHAGEAL BOUGIES

507942

This tungsten-filled bougie provides a single style of dilator for treating cardiospasm, esophagitis, stenosis and other esophageal diseases. The small, flexible tip is easily introduced through the cricopharynx area, cardioesophageal junction or stenosis. Once the tip is through the involved area, the tapered end allows the single bougie to dilate this portion of the esophagus to its maximum limit. Overall length is approximately 29-1/2" (75 cm).

Esophageal Dilators

JACKSON ESOPHAGEAL DILATORS

507820

The Prime Jackson Esophageal Dilator have proved popular and effective among surgeons. Now available in a durable silicone material. This configuration is the safest of all forms of dilators because of the thin, flexible stem that enables accurate ocular guidance of the dilator into the lumen of the stricture. A small size (12 Fr.) is often useful to make sure of a lumen ahead at the cricopharyngeal and hiatal levels during esophagoscopy as well as in cases of stenosis. The steel stem also permits the use of the tiniest filiform sizes. Overall length ranges from 25" (63.5 cm) for the 8 - 12 Fr. to 26-1/2" (67.5 cm) for the 20 - 42 Fr.

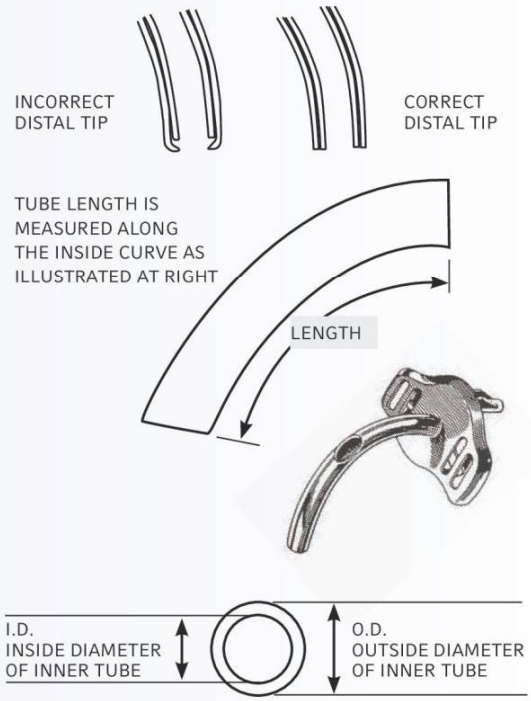
PRIME TRACHEOSTOMY AND LARYNGECTOMY TUBES

Prime Tracheostomy and Laryngectomy Tubes are known for their innovation in the sterling silver and stainless steel products. Choose from the largest variety of tube available in standard sizes. In addition, special models and cuts are made to order. Prime Insertion Instruments, Speaking Valves and Decannulation Stoppers are also available.

Sterling silver and stainless steel trachea tube care and cleaning warning:
Do not soak, wash or expose the tubes to peroxide or enzyme cleaners, or sodium hydroxide. These chemical agents will cause the silver tubes to discolor, stain, tarnish and weaken the solder connection joints. These chemical agents will cause stainless steel to pit and stain.



TRACHEOSTOMY AND LARYNGECTOMY TUBES

Most Prime Tracheostomy and Laryngectomy Tubes are completely interchangeable within a size and style. For example, all parts of any #6 Jackson Original Model Tube will fit each other. This interchangeability of parts greatly reduces a major cost: cost of time in sorting, fitting and assembling tubes.

Specifications from the tube designer are rigidly followed. Locking mechanisms are well designed and operate properly.

The inner and outer tubes fit closely to provide maximum airway. The distal edge of the inner tube is flush with, and fits very closely to, that of the outer tube to allow for correct and complete cleaning.

Stainless steel and sterling silver are used in the construction of Prime Tubes. Plating is not used because it wears off due to galvanic action between the plating and the base metal.

Prime Tubes are offered in the largest variety available from any single source; special models and sizes are available.

FENESTRATED TRACHEOSTOMY TUBES

Any Prime Tracheostomy Tube may be fenestrated upon request. The standard fenestration is located at a point, measured from the neck plate, equal to one-third of the length of the tube. Special fenestrated tubes can be made to order. The size and position of special fenestrations must be specified by the prescribing physician.

TRACHEOSTOMY AND LARYNGECTOMY TUBE DIMENSIONS

The dimensions of Prime Tracheostomy and Laryngectomy Tubes are given in a numerical size, an outside tube diameter, and an inside tube diameter. The outside diameter (O.D.) is the mm diameter of the outer tube, while the inside diameter (I.D.) is the mm diameter of the inner tube distal end.

SIZE AND SHAPE SPECIFICATIONS

To measure a tube, fold page on line where indicated and lay the tube on the outline with plate over the page edge. Dimensions shown are tube diameter in mm and Fr. size, and the length in mm around the inside curve. The shorter of the length indicated
(48 mm on #3) applies to Jackson Short Length Tubes. The longer size (58 mm on #3) applies to Jackson Regular Length Tubes. The shape diagrams are quite accurate and are shown to aid in ordering special length tubes as well as standard lengths.

JACKSON IMPROVED TRACHEOSTOMY TUBES MADE IN STERLING SILVER

511125

Sterling silver. Interchangeable. An improved model with a rotating lock to provide quick and easy removal of the inner tube. The unobstructed surface of the neckplate eliminates snagging of gauze wipes and lessened bulk can be more easily hidden beneath patients' clothing. The inert properties of sterling silver construction reduce the allergic reaction to stainless steel. A set consists of an outer tube, inner tube and an obturator. These sterling silver Jackson tubes may be used with Tucker Valved Inner Tubes.

SHIKANI-FRENCH SPEAKING VALVE AND INNER TUBE COMBINATION

518027

Patients using standard Prime Jackson Trachea Tubes can now realize the benefits provided by the Shikani-French Speaking Valve. By replacing the inner trachea tube with one of the tubes listed below, patients can attach the snap-on Shikani Valve. Each inner tube is provided with two speaking valves.

Jackson Improved Design – Shikani Valve Compatible

SHIKANI-FRENCH TRACHEOSTOMY SPEAKING VALVE

518085

A lower airway resistance speaking valve.
The Shikani-French Speaking Valve attaches to the standard 15 mm hubs found on plastic and metal tracheostomy tubes. Certain patients may benefit from this unique ball valve design which provides less resistance to airflow at very low flow rates when compared to the membrane valves used on other brands of tracheostomy speaking tubes. The Shikani-French Speaking Valve requires less effort to move air through the valve at low inspiration pressures. Competitive valves are normally in a closed position and require greater inspiratory pressures to initially open the valve and allow airflow. An additional advantage of the Shikani-French Speaking Valve is its low profile, which makes it easy to conceal under clothing.

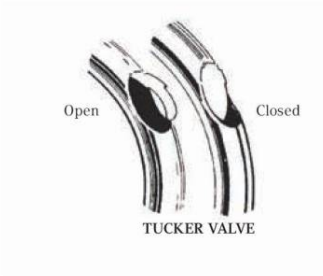
TUCKER TRACHEA TUBES AND VALVES

511734

511735



Tucker Tracheostomy Tubes
Sterling silver. Interchangeable. Acutely curved to a full 90 degree arc. The neckplate, with small swivel lock, is of a distinctive design for identification purposes. A set consists of an outer tube, inner tube and an obturator. Tucker-valved inner tubes (see below) are accessories.

Tucker Speaker Valve
The Tucker Valve is built into an inner tube and allows for normal speech without covering the tube with a finger. The valve opens on inhalation through the tube. On exhalation, the valve leaflet closes, forcing air up through the upper airway. Tucker-valved inner tubes are available for regular length Jackson and Tucker Tubes as a standard item in sizes 4 through 9 in Tucker Tubes, and 4 through 8 in Jackson Tubes. Other sizes and styles are made on special order. The Tucker Valve is for use with sterling silver tubes only. Tucker Valve Inner Tubes are not supplied as part of the regular trachea tube and must be ordered separately. An obturator is supplied with the inner and outer tube sets.
